

6/4/2026

To Whom It May Concern,

It is my distinct pleasure to write this letter of recommendation for Meghana Lakshminarayana Swamy, a graduate student in the M.S. Business Analytics program at the University of New Haven. I have had the privilege of knowing Meghana in two capacities: as her professor and as her faculty supervisor during her time as my Teaching Assistant for the Business Analytics curriculum. Over the course of her program, I have had ample opportunity to observe her intellectual capabilities, work ethic, and professional growth firsthand.

Meghana has demonstrated exceptional aptitude across core Business Analytics coursework, consistently maintaining a GPA of 3.84/4.0 — placing her among the strongest students in the program. She approaches complex, ambiguous problems with both analytical rigor and creative thinking, and has a rare ability to translate technical depth into actionable business insight. Her proficiency spans a broad technical stack including Python, R, SQL, Power BI, Tableau, Oracle APEX, ETL workflows, and advanced AI/ML tooling such as RAG pipelines, vector databases, and LLM integration.

As a Teaching Assistant for the Business Analytics program, Meghana played an integral role in supporting both instructional delivery and student success. She guided students through Data Analytics concepts, facilitated coursework, and provided consistent academic support — all while managing her own graduate studies. Her reliability, clarity of communication, and genuine investment in student learning are qualities I have rarely seen at this level.

Beyond the classroom, Meghana has pursued substantial applied experience. During her internship as a Data Administrator at DAE (New Haven), she administered PowerSchool SIS for 500+ students, built operational dashboards using Oracle APEX and SQL, reduced report generation time by approximately 30% through query optimization and workflow automation, and designed ETL pipelines ensuring real-time multi-source data consistency. She has also independently built ARIA, an AI-powered stock market intelligence agent leveraging a RAG pipeline with Groq LLaMA 3.3 70B, Pinecone, and HuggingFace embeddings — deployed live as a full-stack application. Her capstone project analyzed 29,000+ daily traffic records for the Port Authority of NY & NJ, building and deploying predictive models via FastAPI, Docker, and Kubernetes. She additionally won Best Use of Solana at Hack New Haven 2026 and placed 2nd in a Cross-Disciplinary Case Competition involving Walmart, Ørsted, and Karya cases — demonstrating both competitive instinct and the ability to communicate data-driven strategy under pressure.

Meghana Lakshminarayana Swamy is a highly capable, driven, and well-rounded professional. She possesses the technical skills, intellectual curiosity, and collaborative spirit that employers in data and analytics consistently seek. I strongly and without reservation recommend her for any data, analytics, or business intelligence role she pursues. Should you wish to discuss her qualifications further, please do not hesitate to contact me.

Sincerely,
Gazi Duman

Gazi M. Duman, Ph.D.
Assistant Professor,
Chair, Dept. of Economics & Business Analytics
Coordinator, MS in Business Analytics
